KIWICARE®

KIWICARE:
LIVING WITH NATURE,
BACKED BY SCIENCE

Founded in 1986, Kiwicare has built a strong reputation for insights and knowledge, that has in turn helped New Zealanders live with nature in their workplaces, communities and homes.

Sometimes we need to help nature grow for us in certain ways to protect our environment. Other times we need to get rid of pest plants, insects and animals that invade our spaces & threaten our bio-diversity.

While these tasks appear simple, they can be complex, technical challenges. Often the products available are compromised blunt instruments that either kill what we want to keep or just don't work.

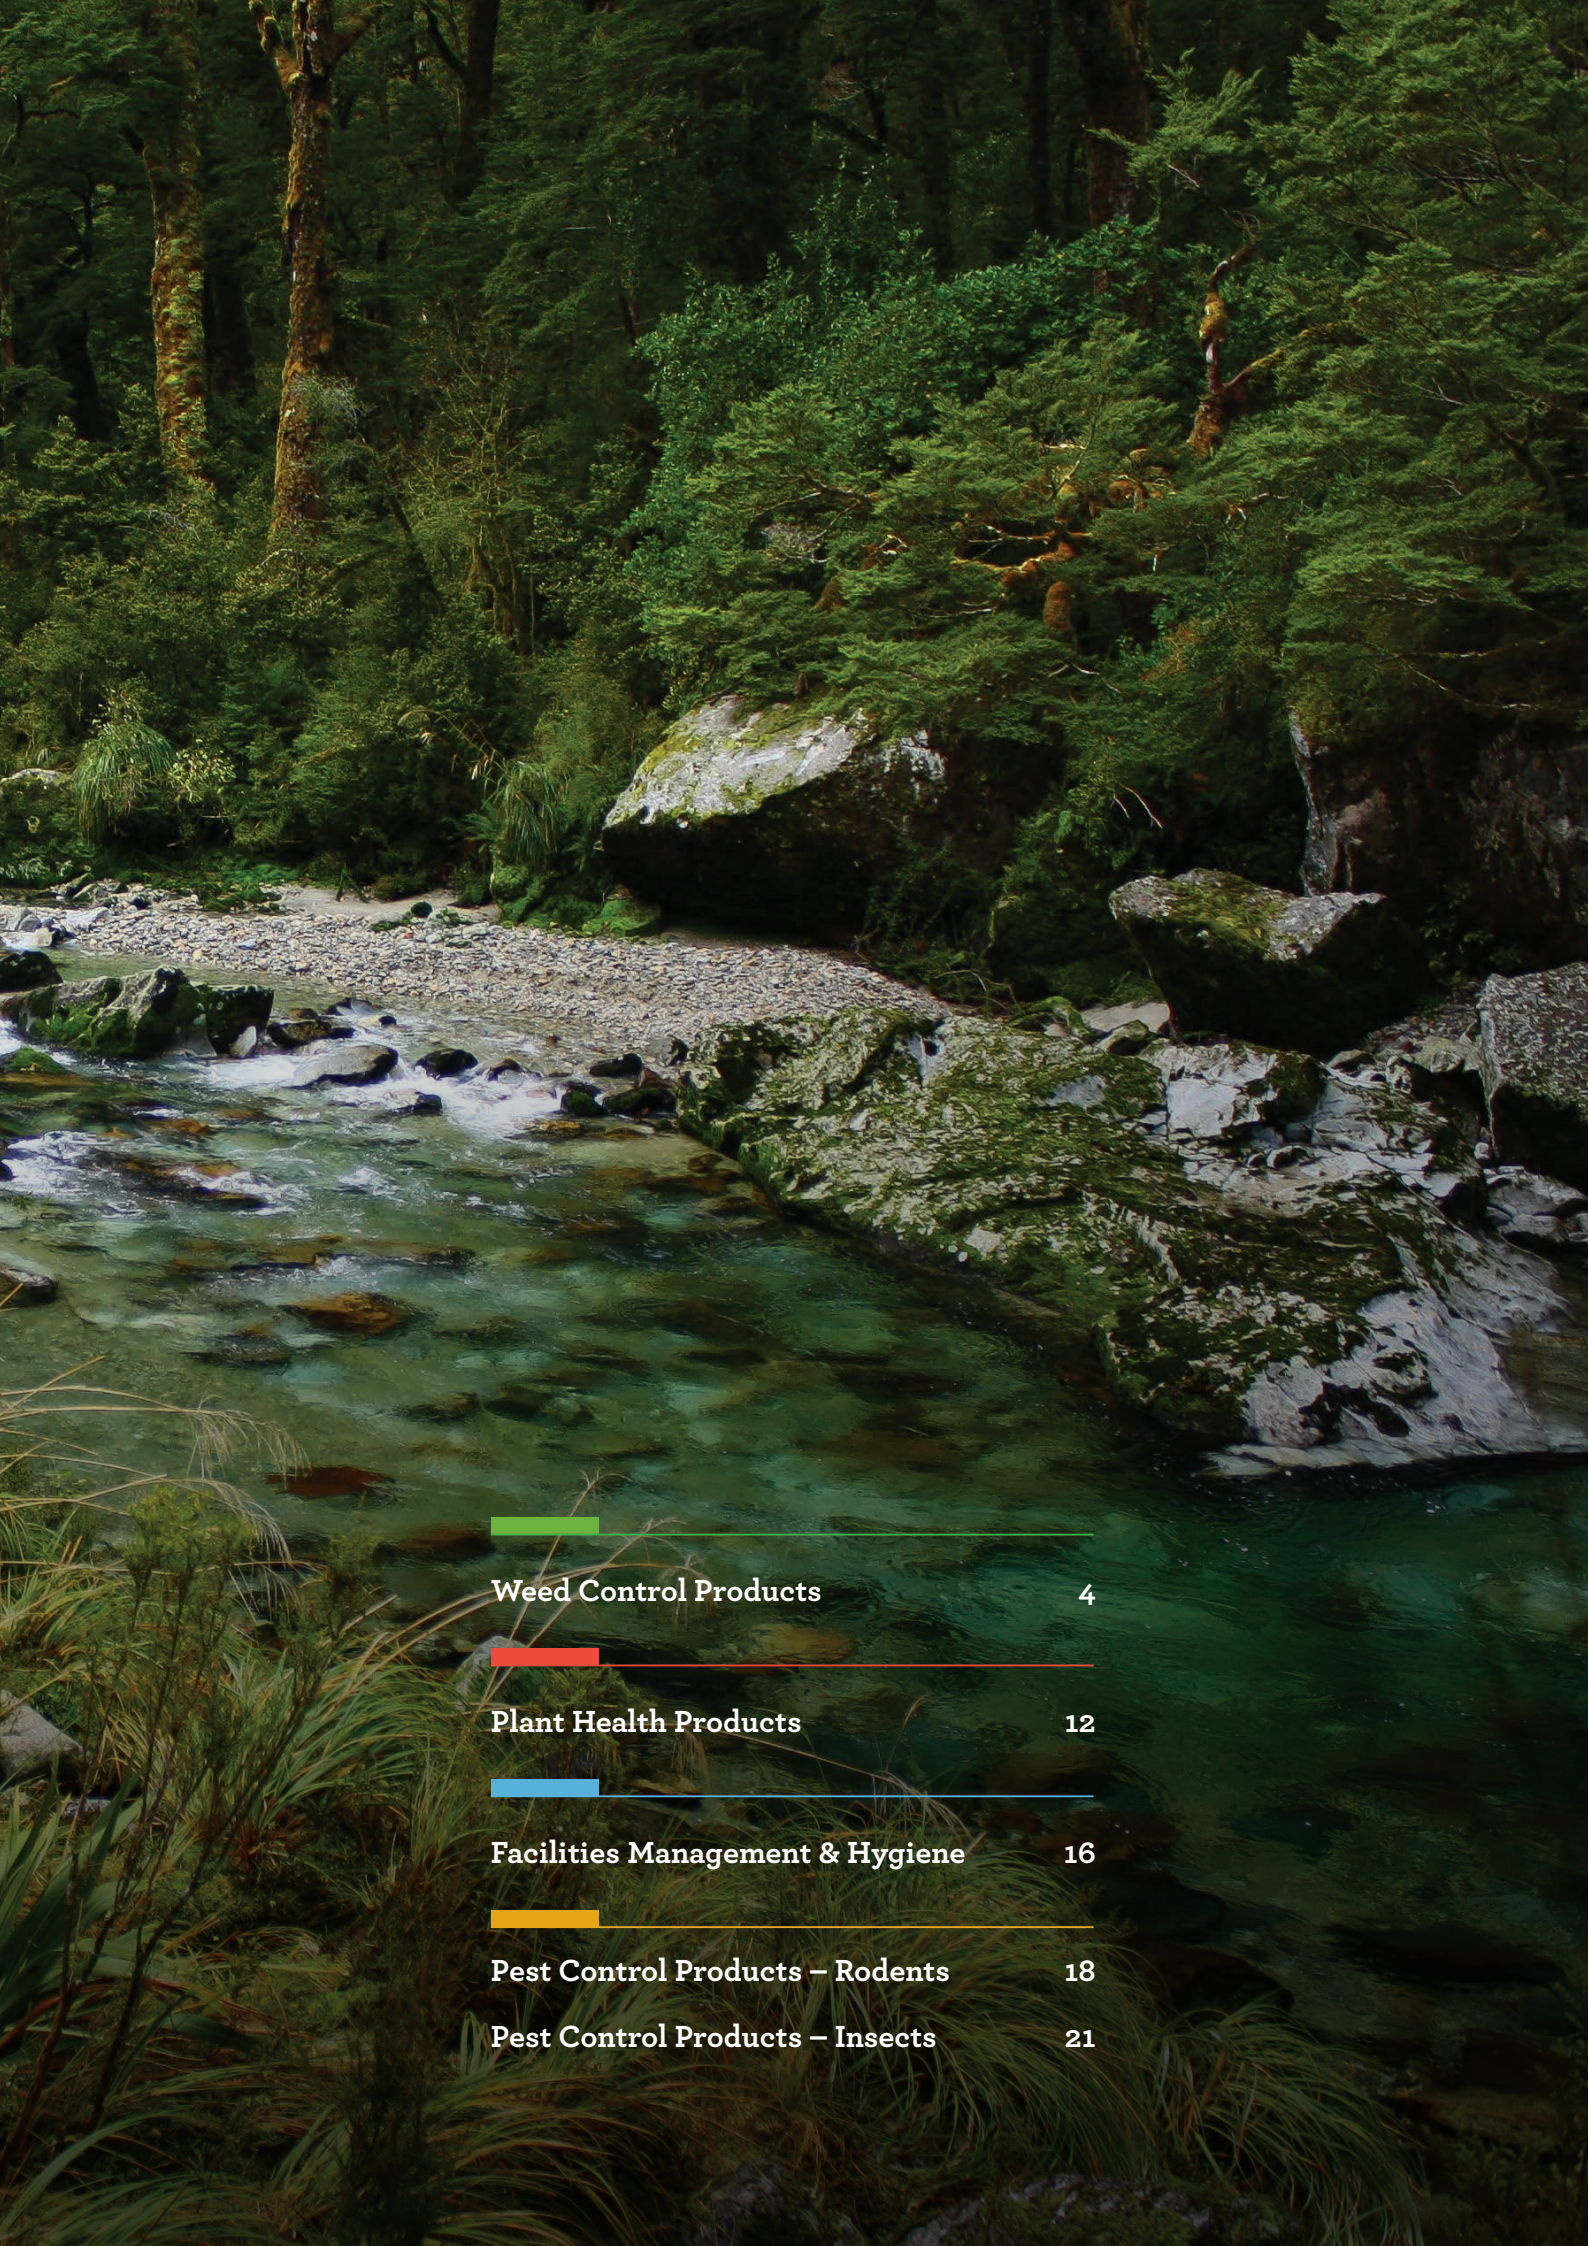

Kiwicare is an innovative company driven by curiosity, insight and a relentless belief that if there is a better way to solve a problem, then do it.

We help you control weeds, while keeping desirable species healthy.

We take care of infestations of pest insects and rodents in a sustainable, safe way.

With a clever blend of human insight, technical know-how, and pragmatic persistence, Kiwicare helps people live with nature.

We look forward to working with you to help solve some of nature's challenges.

WEED CONTROL PRODUCTS

GLYPHO GEL 100/WEED WEAPON INVADE GEL

Glypho Gel 100/Weed Weapon Invade Gel is a powerful gelled herbicide that can be painted onto the cut stems of tough weeds immediately after cutting to kill the root systems and prevent re-growth.

BENEFITS

- Targeted spot treatment of tough woody weeds, vines and creeping weeds.
- Does not move through soil; will not harm surrounding plants.
- Stable humectant gel.
- Adheres well to newly cut stems.
- Formulated to resist drying and washing off giving time for high active dose.
- Moves easily into stem/stump to roots – systemic.
- Red colourant makes it easy to see where treatment has been applied.

IDEAL USES

- In environmental projects, around established natives, ornamentals, shrubs and trees

CONTROLS

- Woody weeds inc.
 - Nightshades
 - Gorse
 - Broom
 - Willow
 - Privet
 - Blackberry
 - Buckthorn
- Vines inc.
 - Old Man's Beard
 - Bindweeds
 - Honeysuckle
 - Ivy
- Tree stumps
- Coarse grass tufts in turf

WEED WEAPON EXTRA STRENGTH

Weed Weapon Extra Strength is a post-emergent weed killer with rapid activity recommended for the control of annual grasses and broad-leaved weeds.

Weed Weapon Extra Strength contains 2 active ingredients with different modes of action:

1. Glyphosate controls existing weeds by moving into the weed and down to the roots.
2. Saffufenacil moves into the leaves of existing weeds and blocks photosynthesis causing rapid damage to green parts of the plant this allows glyphosate to enter and assists its movement to the roots.

BENEFITS

- Kills a broad range of weeds and grasses.
- Kills to the roots for effective control.
- Reduces risk of resistance developing due to 2 different modes of action.
- Biodegradable in soil.
- Rain fast in 2 hours.
- Can be used all year round.
- Safe for children and animals once dry.

IDEAL USES

In Regional parks and non-crop areas.

CONTROLS

A broad range of weeds including (but not limited to) :

- Agapanthus
- Annual Poa
- Black nightshade
- Broad-leaved dock
- Dandelion
- Docks
- Fathen
- Mallows
- Pink Shamrock (suppression)
- Plantain
- Ryegrass
- Tall Willow Herb
- White Clover
- Willow Weed
- Wireweed

WEED WEAPON LONG TERM

Kills weeds and prevents growth for up to 12 months.

Weed Weapon Long Term is a combination of 3 active ingredients:

1. Glyphosate controls existing weeds by moving into the weed and down to the roots.
2. Saffluenacil moves into the leaves of existing weeds and blocks photosynthesis causing rapid damage to green parts of the plant this allows glyphosate to enter and assists its movement to the roots.
3. Terbutylazine affects both existing weeds and stays active in soil preventing new weed seeds or bulbs germinating and reaching the surface.

BENEFITS

- Kills current growth and prevents weed seeds germinating for long term weed control.
- Reduces risk of resistance developing due to 3 different modes of action.
- Provides up to 365 days prevention.
- Rain fast in 2 hours.
- Can be used all year round.

IDEAL USES

Roadsides, fence lines, trails and tracks, pathways, driveways, car parks & other hard surfaces and other non-cultivated areas where weeds are to be suppressed for extended periods.

CONTROLS

A broad range of weeds including (but not limited to) :

- Agapanthus
- Annual Poa
- Black nightshade
- Broad-leaved dock
- Dandelion
- Docks
- Fathen
- Mallows
- Pink Shamrock (suppression)
- Plantain
- Ryegrass
- Tall Willow Herb
- White Clover

WEED WEAPON 700SG DRY GLYPHOSATE

Weed Weapon 700 SG Dry Glyphosate controls existing weeds by moving into the weed and down to the roots.

BENEFITS

- High density glyphosate which dissolves rapidly in a tank mix and remains stable for weeks.
- Eco-friendly space saving packaging means no heavy plastic container to recycle.
- Highly soluble granule means no blocked equipment.
- Eco-friendly non-POEA formulation; does not contain polyoxyethyleneamine surfactant.
- Not classed as a Dangerous Good therefore transportation and storage requirements are minimised.
- Easy to handle packaging which reduces the risk of ergonomic injuries.
- Easily measured therefore reducing the risk of over use.
- Because the product is concentrated it requires less storage space than liquid glyphosate.

IDEAL USES

General weed control.

CONTROLS

A broad range of weeds including (but not limited to):

- Amaranthus
- Barley grass
- Capeweed
- Cleavers
- Spiny emex
- Storksbill
- Fumitory
- Mintweed
- Patersons curse
- Prairie grass
- Ryegrass
- Saffron thistle
- Vulpia hairgrass
- Subterranean clover
- Wild mustard
- Wild turnip

BIO WEED BLAST

Bio Weed Blast contains naturally derived fatty acids which disrupts the plant's waxy cuticle and damages stomata. The fatty acid soap softens wax, 'washes' wax off and breaks cell walls. The weed then uncontrollably loses water, dehydrates and the affected tissues die. This is fatal for most annual and young perennial weeds.

BENEFITS

- Non-residual, non-selective weed control for applications where 'chemical' herbicides are not desirable.
- Fast acting: visible effects within 3 hours.
- Bio-degradable and inactive in soil.
- Innovative surfactant system increases tank mix stability and reduces the need to continuously agitate.

IDEAL USES

For weed areas where an alternative for glyphosate is required.

CONTROLS

Annual and young perennial & biennial weeds.

Lichen and liverwort on hard surfaces.

WEED WEAPON NATURAL POWER

Non-residual, non-selective weed control for organic applications where 'chemical' herbicides are not desirable.

Because **Weed Weapon Natural Power** burns down weeds by foliage desiccation, and is non-systemic, it will kill many weed species. It is most effective when weeds are young.

BENEFITS

- Fast acting; visible results within 1 - 3 hours.
- Remains inactive in soil; won't harm neighbouring plants.
- Natural plant derived fatty acids.
- BioGro® certified for use in organic agriculture and horticulture.
- Internationally accredited under IFOAM, MPI OOAP – EU / USDA NOP / Taiwan, JAS and COR
- Rainfast in 1 hour.
- Does not contain glyphosate.
- Safe for children and pets once dry.
- Registered for use around fruit and vegetables.

CONTROLS

- Grass weeds
- Broad-leaf weeds
- Clovers
- Algae
- Moss

IDEAL USES

For weed areas where an alternative for glyphosate and BioGro, IFOAM, MPI OOAP – EU / USDA NOP / Taiwan, JAS and COR certification is required particularly for organic fruit, vegetable and agriculture environments.

WEED WEAPON PREVENTER

Weed Weapon Preventer is used as a barrier to prevent weed emergence, meaning that it is ideal to keep a variety of soil and hard surface areas weed free.

BENEFITS

- Will not harm established plants.
- Suppresses weeds for long term control; up to 3 months.
- Safe for children and pets after watering in and left to dry.
- Reduces labour, agri-chemical and traffic management costs when servicing assets.
- All-in-one formulation eliminates the mixing of many chemicals.
- Reduces the risk of ergonomic injuries versus hand weeding.
- Can be applied in all weather conditions including wind and rain. This increases team productivity.

IDEAL USES

For use as a replacement for hand weeding and controls common weeds, including hard to kill bulbous weeds, prior to emergence.

Effective in amenity, street and traffic roundabout gardens.

CONTROLS

TURF CLEAN ULTRA

LawnPro Turfclean Ultra is a fast-acting, selective herbicide that controls a broad range of weeds in turf and lawns. The combination of 4 active ingredients has been especially formulated for New Zealand conditions.

BENEFITS

- Systemic mode of action controls common broadleaf turf weeds.
- Curative: kills existing broadleaf weeds, dandelion, clover, Hydrocotyle, Onehunga, selfheal, speedwell, oxalis, daisies, dock, plantain and many more.
- Preventative: continued activity in the soil suppresses growth of weeds for an extended period.
- Formulation reduces the risk of burn to fine turf grasses
- Visible effects often within 2 days.

IDEAL USES

Turf areas, amenity gardens, landscaped lawns.

KIWICARE®

PLANT HEALTH

INSECT CONTROL GRANULES

Insect Control Granules are used to control aphids, mealy bugs, scale insects, psyllids, and other sap sucking and chewing insects on shrubs, hedges and ornamental plants. Thiamethoxam and Lambda-Cyhalothrin provide systemic and contact modes of action respectively. The systemic insecticide is taken up by roots for direct control of the sap sucking and chewing insects. The contact insecticide provides a barrier to pests emerging from the soil below and acts as a barrier to ants that 'farm' and protect the sap sucking insects.

- The 2 active ingredients eliminate the need for multiple products for a plant protection insect control programme.
- Provides both curative and preventative control. Controls existing infestations and prevents new infestations of insect pests. Provides a consistent outcome and reduces the need for repeat applications.
- Granules can be applied in all weather conditions, including rain, therefore reducing worker down time, application time and increasing productivity.
- No spray drift from granular application reducing exposure to applicators and bystanders.

20 kg

PLANT HEALTH BUXUS BLIGHT BUSTER

General purpose protectant fungicide for ornamentals, roses and turf. Can also be used as browsing animal repellent.

- Sulphur group fungicide.
- Preventative and curative.
- Liquid formulation.
- Controls Buxus Blight, Leaf Spot, Mildew, Root Rot, Dieback, lawn diseases and more.

PRODUCT CODE

G31321

PRODUCT SIZE

400 ml Concentrate

PLANT HEALTH SPECTRUM

An all in one solution to control fungal diseases and insect pests by way of 2 active ingredients: Myclobutanil & Tau-fluvalinate.

- The product has 2 modes of action (systemic fungicide and contact insecticide) which saves preparation and application time.
- Effective against the main groups of fungal disease on roses and ornamentals particularly rose blackspot and other leaf spot diseases, therefore maintaining healthy appearance of plants.
- Controls a broad spectrum of sap sucking and chewing insect pests including aphids, scale, mealybugs, thrips, and bronze beetle.
- Provides both curative and preventative control of disease and insect infestations therefore extending the life of plantings.
- Insecticide mode of action minimises the risk of effecting bees that interact with the plant.

GRO-SURE PLANTING MAGIC

A 4 in 1 planting mix that provides essential nutrients for plant establishment and season long vigorous growth. It improves water and nutrient retention around root system, improves soil condition and beneficial micro-organisms and boosts root development.

- Consistent outcomes as all in one product removes the need to mix different products.
- 4 in 1 mixture reduces application time as there is no need to use multiple products for the same results.
- Formulation provides higher yield plantings which establish and grow faster and more vigorously. Planting rework is minimised.
- Humic acids and baked clay granules improve soil health by promoting beneficial micro-organisms.
- Provides more efficient nutrient uptake for more vigorous plant growth.
- Baked clay granules provide moisture retention and slow release to roots improving drought resistance of planting.

SELONTRA® SOFT BAIT

For the control of rats and mice in reserves, along fence lines, and in and around industrial, commercial, agricultural and domestic buildings.

- To be used in a bait station
- Non-anticoagulant rodenticide for high pressure and sensitive situations.
- Highly palatable soft bait formulation.
- Lower risk of contamination and secondary poisoning.
- Stop feed effect means up to 30% less bait is needed to control populations.
- Faster control of rats and mice than with anti-coagulants.
- Active constituent: 0.75 g/kg cholecalciferol (vitamin D) plus Bitrex® human taste deterrent.

The low to no risk of secondary poisoning makes Selontra a safe option in situations such as animal husbandry and where pets and other scavenging animals could encounter and consume dead or dying rodents.

As a rodenticide with a completely different mode of action to anti-coagulants, it makes an ideal pulse bait, helping to control rodent populations that may have developed tolerance to anti-coagulants through long term anti-coagulant baiting.
